No. 1 - 2020

Specific Conditions of Use

Service Bulletin

Within the MarFlex ATEX system certification, the ambient and cargo temperature ranges have been increased for specific cargo types for all new buildings, signed after 10 April 2020.

The updates on the new 'Specific Conditions of Use' are:

- Applicable for T4 classified cargoes
- The maximum ambient temperature has been increased to +45°C
- The maximum cargo temperature has been increased to +45°C
- Dry run protection must be incorporated

Equipment for vessels delivered, and/or contracts signed prior to 10 April 2020, can be upgraded to the new 'Specific Conditions of Use' by complying with the requirements of the dry run functionality.

The other 'Specific Conditions of Use' remain unchanged.
